mag prince Setup Guide

Step 1:

Download and install magprince:

You have already downloaded the zip file *magprince.zip*. You will find 2 folders in the theme pack.

**1. magprince theme.**

2. **Plugin required for the theme.**

Upload the the plugins to your *site/wp-content/plugins* folder via FTP. Once uploaded, go to the plugin section of your wordpress admin panel and activate the plugins. Next upload the theme folder to your *site/wp-content/themes* folder via FTP. Once uploaded activate the theme via the design section of admin panel.

Step 2:

Customization:

Once the theme is installed go to the custom theme option (*magprince Option*) page of the magprince theme. You will find different options which deals with the various modules of this magprince theme. I will explain them one by one.

1.   **Featured content gallery**

Featured content gallery is the module located at the top part of the theme. It shows a content glider with dimensions of 950 x 300, which is associated with posts via a custom field. You can select a particular category and number of posts to display in this module. Once a category and number is selected, the module will display images from the latest posts of that category.

mag prince Setup Guide

Note: you have a folder in theme folder with name **Slider** paste 950*300 px images in that folder to show images in gallery.

2. Post Thumbnail

Each post have an images (250 x120 px) associated with it. This image is entered via custom fields. The custom field key and value for displaying images with post is as given below.

Custom field key - **screen** (case sensitive)
Custom field value - **url of the images**

Add new custom field:

Name	Value
screen	http://seojobsnow.com/wp-content/uploads/Thumbnail.jpg
Cancel	

Add Custom Field
